communication arcs E:
nodes within R of i
reach limit 0.9NR
convex hull H of depot and demand points
margin $h/\sqrt{2}$ around H
pruned node (outside the margin), 39
kept node (within $h/\sqrt{2}$ of H), 24
move set $A(i)$ (ℓ = 139 m)
example node i
depot (node 0)
demand point nodes D
